About	<p>Comspot is a rounded, typewriter-flavoured font family with a human touch. Originally designed as a custom typeface* Comspot's nine weights – razor-thin hairline to ultra black – and 14 stylistic alternates fulfil every need, from extended to display text.</p> <p>Comspot's typewriter flavour is strongest in letters like f and t, with their wide middle strokes, and the tighter design of w, M and W, with their repositioned centre joints. Glyphs that would normally cause trouble in monospaced fonts have been carefully balanced for text, and have easily-accessed alternates to emphasise the font's typewriter vibe and bring more character to display settings. Where the roman mixes in monospaced forms, the italic finds a balance between real italic and sloped roman shapes. The subtle rounding of Comspot's corners increases from Hairline to Ultra, producing fine and elegant light styles and humane heavy weights.</p> <p>Like all TypeMates fonts, Comspot supports the full Adobe Latin 3+ character set and thus some 90 languages. Along with using Stylistic Set 01 to unleash glyphs with an extra technical typewriter flavour, Comspot offers a lot of typographic features: tabular figures, fractions, superscript or even contextual alternates. That's a TypeMates standard, too. A set of individual DIY-Icons like a great big wood axe, a warning triangle and protective gloves can introduce a fun factor to do it yourself projects.</p> <p>As not all software fully supports OpenType features, we offer two versions of Comspot. Both versions share all the same glyph designs, but Comspot Tec swaps Comspot's monospace-y stylistic set with some of its default characters. If you're worried about default encoding, it can matter which version of Comspot you purchase, but for everyone else the two character sets can easily be swapped back.</p>
Designer / Year	Nils Thomsen in 2017

Medium/Bold + Italics 8–9,7 pt

You wouldn't dream of putting diesel gasoline in your car's engine, or try to run a D-cell flashlight with 9-volt batteries. Common sense tells you that the result of trying to operate something with the wrong type of fuel can be futile at best, or worse – it can lead to expensive repairs. Using the right type of fuel is critical in the safe and efficient operation of your STIHL equipment. All STIHL *gasoline-powered equipment* runs on a 50:1 mixture of gasoline and 2-cycle engine oil. Knowing the proper way to mix your fuel is the first step in keeping it running strong and long. When choosing a gasoline to use, don't go with the cheap stuff. Mid-grade unleaded gasoline with a minimum octane rating of 89 is

Eight Tool Organization Projects to Build This Weekend

If there is one thing most of us can agree on, it's that there is nothing worse than a cluttered, unorganized garage. Not being able to find a tool when you need it is literally the worst. While there are a lot of options for storing away tools and keeping them organized (like the Craftsman Pro Series Tool Storage with Smart Lock) there are other, more creative ways to do it as well. Check out these great projects that will not only keep you busy in the workshop, but keep your workshop from feeling too busy after.

Willy used to work as a scheduler for New Orleans' Regional Transit Authority, but after Hurricane Katrina, nobody was riding the bus due to displacement and the city's devastated infrastructure. Like so many others, he lost his job, but he wanted to stay and help to rebuild his city. He fell back on his construction skills. "Mom always told me to do more than one thing. My uncle did construction, so I picked it up when I was younger. But I tell you, if there's one thing I was meant to

do, it's to work with youth." So, he started managing construction jobs with a nonprofit after the hurricane, and then eventually joined up with Louisiana Green Corps this August. "This. This is my passion, I love to hear the success stories."

Anyone from the area will tell you that the New Orleans will never be the same New Orleans it was before Katrina. There are painful and permanent changes with hundreds of lives lost, the demolition of over 23,000 homes, and displacement of tens of thousands of residents who were never able to return to their home. Still, there's an unconquerable energy and the city is brimming with success stories, and new opportunities, in this case, for young New Orleanians.

The Louisiana Green Corps fills a crucial role by providing environmental education and career building opportunities for 16- to 24-year-olds who want to improve their lives and their communities. The organization works as an agent for social, environmental, and economic change by providing training and education services, advoca-

cacy, and environmentally restorative projects in the community.

Running a successful jobs training program isn't just about teaching basic jobsite skills, however. In addition to teaching the hard skills, Louisiana Green helps trainees gain work adjustment skills, overcome social obstacles, secure a job, and identify resources to help them become successful, contributing members of the workforce. It's not enough to show up with some tools and know-how, you have to know how to socialize, where to put your money, etc. That said, environmentally-focused restoration and revitalization projects prepare Corps members for entry into new green industries while helping the local economy through the development of social enterprises. These enterprises create economic opportunity while meeting social and environmental needs.

Anna, an Americorps mentor who partners with the Corps and helps teach trainees, lead me around the house they are currently construc-
